Post-Doctoral Research Position in Organic Photovoltaics

The Organic Optoelectronics Laboratory at Case Western Reserve University's Department of Physics anticipates an opening for a postdoctoral researcher beginning February 1, 2010. The position involves the development of a nonlinear optical near-field microscope imaging technique for polymer photovoltaic materials. The position will involve developing a nonlinear optical near-field technique for imaging the morphology of polymer blend semiconductor materials and devices. In addition to the work on the optical technique, the successful applicant will fabricate and characterize thin film devices in our well-equipped fabrication and characterization laboratory. A Ph.D. in physics, or related fields is required. Experience in scanning imaging and/or polymer materials is strongly preferred. The initial appointment is for one year. More information about the research group can be found at <http://nlo-server.phys.case.edu>. Those interested in applying should send their CV and the names and addresses of three references to (email is preferred):
